

VI. DATABASE

Presentation of Data

Site Number

Reference number (e.g. UG 001, etc.) allocated to a site in the database and shown as a red numeral on the base map (where initial zeroes are omitted). UG numbers were allocated in the order that data were acquired and are not in any rational geographical pattern. In the original data there were some overlaps or duplications so that there are occasional blank spaces in the list of numbers.

Site Type

Type of site is usually taken from Devon Historic Environment Records or English Heritage lists of monument types but sometimes is substituted by a different description where that appears more appropriate. For each entry the number of the relevant 1:12500 map is shown in the lower right hand corner of the cell

Grid Reference (GR)

Eight-figure National Grid References are given wherever possible. For a larger site the grid reference given is for its centre; for very large or linear sites, those of the extremities.

Description

Summary description of a site based on an HER and/or the Parish Survey. The latter included field-walking, interpretation of old maps, AP and satellite (PastScape) images, and study of historic documents. Metric measurements are used throughout but Imperial equivalents are added where these are likely to be in more familiar use e.g. railway gauges. Compass directions are expressed with capital letters but place names are written in full e.g. '200m W of West Peake'.

Numbers in italics at the end of site descriptions are of those of photos in the Ugborough History Group's archive collection. This collection is continually growing and may be worth consulting for recent additions.

Period

Date of site using Devon Historic Environment Record broad periods and periods where known. Broad periods are: *Prehistoric*; *Roman* (43-410AD); *Early Medieval* (410-1066AD); *Medieval* (1066-1540); *Post-Medieval* (1540-1901); *Modern* (1901-); *Multiperiod*; *Unknown*. Roman numerals indicate the century when it is known.

HER

Historic Environment Record numbers are now the accepted form of reference for all registered sites, replacing earlier PRN or SMR numbers (which may still be encountered in the literature). Current HERs are of very variable quality and are constantly being revised by

Devon Heritage Environment Record and Dartmoor National Park Authority, to whom reference should be made if it is important to have the very latest information.

LB and/or SM

Listed Building grades (Grade I, Grade II* or Grade II) and Scheduled Monument numbers are given where applicable.

Sources of Information

The source of information for a site is given in its *Description*. Where no source is quoted it can be assumed to be from the Parish Surveys between 2004 and 2015. Abbreviations used for sources are:

AP = Aerial photograph (with year of sortie)

DB= Domesday Book

OS map number, e.g. '1:10560 1889 (CXXV.NE)' = Ordnance Survey 1:10560 map of 1889, sheet number CXXV.NE

PND = Gover, Mawer&Stenton: *The Place Names of Devon*

SURVEY = *Life into Landscape Parish Survey: Ugborough (2004-2015)*

SWW = South West Water

TA = Tithe Apportionment 1842

TM = Tithe Map 1843

For other authors quoted in the descriptions, refer to the **Bibliography**.
